3

Place adolescent girls at the center of international and national action and investment on maternal health.

New advocacy and programmatic investments give renewed hope for maternal health. Within advocacy and program efforts, specific attention to girls will pay off. Donors should support research on the risk factors for pregnant adolescents and evaluations of programming for girls facing high hurdles to health care. They should translate evidence into programming to reduce adolescent maternal mortality beyond labor and delivery to also include family planning, nutrition, and abortion-related care. Funding should be earmarked for adolescents within any new resource package for maternal health.

6

Make secondary school completion a priority for adolescent girls.

Getting girls through secondary school is one of the most important actions governments can take to improve girls' chances for good health. Governments should extend the definition of basic education, to which all are entitled, to lower secondary or to age 16. Governments and the private sector, with donor support, must increase formal and non-formal school places by extending primary school facilities, offering targeted scholarships or household cash transfer schemes to disadvantaged girls, and offering open-learning programs so girls can study at their own pace.
